Complete Platform Workflow Specification

Version 1.0 | 2026-06-22 | CFD/Forex Brokerage — Marketing Site + Client Portal

End-to-end operational workflow covering actors, modules, user journeys, money movement, compliance, statuses, data model, permissions, and integrations.

Prepared by Core Care Consultancy

Appendix E — Implementation Phases..... 17

1. Application Actors / User Roles

Actor	Scope	Description
Visitor (Lead)	Public	Anonymous prospect browsing the marketing site; can submit lead/demo/contact forms.
Registered Client	Portal	Verified or pending account holder; trades, funds, manages account.
IB / Partner	Partner portal	Introducing Broker / affiliate earning rebates on referred client volume.
Support Agent	Admin	Handles tickets, live chat, basic client assistance.
KYC / Compliance Officer	Admin	Reviews and approves/rejects KYC, AML checks, risk flags.
Finance Officer	Admin	Approves deposits/withdrawals/transfers, reconciles funds.
Administrator	Admin	Full configuration: accounts, leverage, content, roles, partners.
System / Scheduler	Automated	Notifications, status transitions, rebate calc, scheduled jobs.

2. Full System Modules

- **Public Website:** Home, About, Trading Accounts, Markets, Partnership/IB, Contact, Login, Register.
- **Onboarding:** Multi-step registration, demo request, lead capture, email verification.
- **KYC / Compliance:** Identity, Proof of Address, Selfie — upload, review, status.
- **Account Management:** Dashboard, Accounts, account creation (Standard/Raw/VIP), leverage selection.
- **Funds / Cashier:** Deposit, Withdraw, Internal Transfer, Transaction History.
- **Downloads:** Platform installers + document download center.
- **Support / Helpdesk:** Tickets, live chat, FAQ.
- **Partner / IB:** IB registration, referral links, rebate reports, marketing assets.
- **Profile:** Profile, security, preferences, notification settings.
- **Admin Back-office:** User mgmt, KYC queue, finance approvals, content/CMS, partner mgmt, audit log.
- **Notifications:** In-app, email, toast queue across all events.

Figure 1 — System modules and how they connect.

3. End-to-End User Journey

Visitor → Marketing site → Lead form / Register → Email verify → Login → KYC → Open trading account → Deposit → Trade → Withdraw → Ongoing support / partner growth

Figure 2 — End-to-end client journey (top row left-to-right, bottom row right-to-left).

1. Visitor discovers the brand via marketing site or partner referral link.
2. Submits a lead (demo / contact) or registers a live account.
3. Verifies email, logs into the client portal.
4. Completes KYC (identity, address, selfie).
5. Opens a trading account (Standard / Raw Spread / VIP) with chosen leverage.
6. Deposits funds via preferred method.
7. Downloads platform, trades, monitors KPIs on dashboard.
8. Withdraws profits; raises support tickets as needed.
9. Optionally becomes an IB to refer and earn rebates.

4. Lead-to-Client Conversion Workflow

Lead captured → Nurtured → Registered → Verified → KYC → Funded → Active Client

10. Lead captured (contact form, demo request, partner referral, newsletter).
11. Lead stored with source + UTM + referring IB; status = New.
12. Automated welcome + nurture notifications; assigned to sales/support if configured.
13. Lead registers a live account → becomes Pending Client.
14. Email verified + KYC approved → status = Verified.
15. First deposit cleared → status = Funded / Active Client (conversion complete).

Conversion KPIs: lead→register, register→KYC, KYC→funded. Each transition emits an event for analytics and (if referred) credits the originating IB.

Figure 3 — Lead-to-client conversion with status at each stage.

5. Registration & Onboarding Workflow

Form (multi-step) → Validation → Create user → Email verify → Login → Onboarding checklist

16. Step 1 — Personal details (name, email, phone, country).
17. Step 2 — Account preferences (account type, base currency, leverage).
18. Step 3 — Credentials + agreements (password, T&C, risk disclosure).
19. Client-side zod validation on each step; cannot advance until valid.
20. On submit: create user (status = Pending), send verification email.
21. Email verified → first login → onboarding checklist (verify KYC, open account, deposit).

Demo flow: shorter form → instant demo account with virtual balance, no KYC required.

Figure 4 — Registration and onboarding flow.

6. KYC Verification Workflow

Not Submitted → Submitted/Pending → Under Review → Approved | Rejected (→ Resubmit)

22. Client opens KYC; sees 3 steps with current statuses.
23. Identity Verification — upload ID/passport (front/back).
24. Proof of Address — upload utility bill / bank statement.
25. Selfie Verification — upload selfie holding ID.
26. Each upload sets that step to Pending → Compliance Officer reviews.
27. Officer approves (Approved) or rejects with reason (Rejected → client resubmits).
28. All three Approved → overall KYC = Verified → unlocks withdrawals & full funding limits.

Gating: deposits may be allowed pre-KYC up to a limit; withdrawals require full KYC. Progress bar reflects completed steps; compliance message shown throughout.

Figure 5 — KYC verification with compliance review.

7. Trading Account Creation Workflow

Choose type → Configure → Confirm → Provision account number → Active

29. Client clicks Open New Account (dashboard) or Choose Account (pricing page).
30. Selects type: Standard / Raw Spread / VIP.
31. Configures base currency + leverage (within type limits).
32. Confirms; system provisions a unique account number with zero balance.
33. Account appears in dashboard table with status = Active.

Type	Spreads from	Commission	Leverage	Audience
Standard	0.8 pips	Commission-free	1:500	All traders
Raw Spread	0.0 pips	\$7 / lot	1:500	Experienced (Popular)
VIP	0.0 pips	Custom	1:500	High-volume

8. Client Dashboard Workflow

34. On login, land on Dashboard with "Welcome back, {name}".
35. Animated KPI widgets: Total Balance, Equity, Free Margin, Margin Level.
36. Accounts table: Account #, Type, Balance, Equity, Status.
37. Quick actions: Open New Account, Deposit, Withdraw, complete KYC if pending.

38. Sidebar navigation to all portal modules; notifications bell + profile menu.

Margin Level = (Equity / Used Margin) x 100. Color-coded thresholds warn on low margin.

9. Deposit Workflow

Select method → Enter amount → Confirm → Pending → Processing → Completed | Failed

39. Funds → Deposit tab; choose method (Bank Transfer, Card, E-Wallet, Crypto).

40. Enter amount + account to credit; see fees, ETA, min/max.

41. Confirm → transaction created (status = Pending).

42. Instant methods (Card/E-Wallet/Crypto) → Processing → Completed quickly; Bank Transfer 1–3 days.

43. On Completed → account balance credited, toast + notification, history updated.

44. On Failed/Rejected → reason shown, balance unchanged, client may retry.

Figure 6 — Deposit flow from method selection to credited balance.

10. Withdrawal Workflow

Request → Validate (KYC + balance) → Pending → Finance review → Approved → Paid | Rejected

45. Funds → Withdraw; select account + method + amount.

46. System checks: KYC Verified, sufficient free margin, withdrawal limits, AML rules.

47. Request created (status = Pending) → balance reserved/held.

48. Finance Officer reviews; Approved → funds sent → status = Paid/Completed.

49. Rejected → reason shown, hold released, balance restored.

Anti-fraud: withdrawals typically returned to the original deposit source first (source-of-funds rule).

Figure 7 — Withdrawal flow with verification and finance approval.

11. Internal Transfer Workflow

Select from/to accounts → Amount → Validate → Execute → Both balances updated

50. Funds → Internal Transfer; choose source + destination account (same client).
51. Enter amount; validate sufficient free margin in source.
52. Confirm → debit source, credit destination (instant, same-currency) or FX-converted.
53. Two linked transactions recorded; both balances + history updated; toast confirms.

12. Support / Helpdesk Workflow

Open ticket → Open → In Progress → Awaiting Reply → Resolved → Closed

54. Client creates ticket (category, subject, message, optional attachment) or starts live chat.
55. Ticket queued (status = Open) + reference ID; client + agent notified.
56. Agent responds → In Progress; threaded replies; status toggles Awaiting Reply.
57. Issue solved → Resolved; client confirms or auto-closes after inactivity → Closed.
58. Client can reopen a closed ticket within a window.

13. Partner / IB Workflow

Apply → Approved → Get referral link → Refer clients → Track volume → Earn rebates → Payout

59. Visitor applies via Partnership page (Become an IB Partner).
60. Admin reviews application → Approved → IB account created.
61. IB receives unique referral link(s) + marketing assets.
62. Referred leads tagged to IB through registration → conversion.
63. System tracks referred clients' trading volume in real time.
64. Rebates calculated per lot/spread; shown in IB reports dashboard.
65. IB requests rebate payout → Finance approves → paid; reflected in history.

14. Admin Workflow

- **User mgmt:** Create/suspend/edit clients, reset access, adjust leverage.
- **Compliance:** Review queue, approve/reject KYC with reasons, AML flags.
- **Finance:** Approve deposits/withdrawals, reconcile, manual adjustments with audit trail.
- **Products:** Configure account types, spreads, leverage caps, fees.
- **Partners:** Approve IBs, set rebate tiers, review partner reports, payouts.
- **CMS:** Edit marketing content, markets list, downloads, announcements.
- **Support ops:** Assign tickets, manage agents, SLA monitoring.
- **Audit:** Immutable audit log of all privileged actions.

15. Notification Workflow

Trigger	Channel	Recipient
Registration / email verify	Email + in-app	Client
KYC submitted / approved / rejected	Email + toast	Client + Compliance
Deposit / withdrawal status change	Email + toast	Client + Finance
Account opened	Toast + in-app	Client
Support reply	Email + in-app	Client / Agent
IB: new referral / rebate	In-app + email	Partner
Security (login, password change)	Email	Client

Global ToastContext queues transient UI toasts; persistent items live in a notifications center with read/unread state.

CORE CARE
CONSULTANCY

16. Compliance & Risk Workflow

66. KYC/AML gate before withdrawals and high-value funding.
67. Sanctions / PEP screening on registration (integration-ready).
68. Source-of-funds rule on withdrawals (return to origin).
69. Transaction monitoring for unusual patterns → risk flag → manual review.
70. Leverage caps and negative-balance protection per account type/jurisdiction.
71. Risk disclosure + T&C acceptance recorded at registration.
72. Full audit trail; data retention + privacy compliance.

17. Edge Cases / Exception Handling

- **Unverified email:** Allow re-send verification; block login until verified.
- **KYC incomplete:** Block withdrawal, prompt to complete KYC.
- **KYC rejected:** Rejected with reason; client resubmits specific step.
- **Withdrawal > balance:** Reject with insufficient-funds message; suggest deposit.
- **Payment failure:** Show Failed state, keep balance unchanged, offer retry.

- **Double submit:** Idempotent submit; disable button + spinner; dedupe by request key.
- **Expired session:** Session expiry → redirect to login, preserve intended route.
- **Loading/empty/error:** Skeletons on load; ErrorState with retry on fetch failure; EmptyState when no data.
- **Reduced motion:** prefers-reduced-motion disables 3D/parallax; static fallbacks.
- **Negative balance:** Block negative balances; margin-call/stop-out warnings.

18. Recommended Statuses per Module

Module	Statuses
Lead	New, Contacted, Qualified, Converted, Lost
Client/User	Pending, Verified, Active, Suspended, Closed
KYC step	Not Submitted, Pending, Under Review, Approved, Rejected
Trading Account	Active, Inactive, Suspended, Archived
Deposit	Pending, Processing, Completed, Failed, Cancelled
Withdrawal	Pending, Approved, Paid, Rejected, Cancelled
Transfer	Pending, Completed, Failed
Support Ticket	Open, In Progress, Awaiting Reply, Resolved, Closed
IB Application	Pending, Approved, Rejected, Suspended
Rebate Payout	Accrued, Requested, Approved, Paid

19. Database Entities / Data Structure Overview

Entity	Key fields
User	id, name, email, phone, country, role, status, createdAt
Lead	id, source, utm, referrerIB, status, contactInfo
KycRecord	userId, idStatus, addressStatus, selfieStatus, docs[], reviewedBy
TradingAccount	id, userId, accountNumber, type, currency, leverage, balance, equity, status
Transaction	id, accountId, type(deposit/withdraw/transfer), method, amount, status, ref, ts
SupportTicket	id, userId, category, subject, messages[], status, agentId
Partner/IB	id, userId, status, referralCode, tier, referredClients[], rebateBalance
Notification	id, userId, type, message, read, ts
AuditLog	id, actorId, action, target, metadata, ts

In the current build these are mock entities in React Context persisted to localStorage; the schema is backend-ready for a real API.

20. API / Module Logic Overview

Domain	Representative operations
Auth	register, verifyEmail, login, logout, refreshSession, forgotPassword
KYC	submitStep, getStatus, review (admin)
Accounts	createAccount, listAccounts, getAccount, updateLeverage
Funds	deposit, withdraw, transfer, listTransactions
Support	createTicket, replyTicket, listTickets, closeTicket
Partner	applyIB, getReferralLink, getRebateReport, requestPayout
Admin	manageUsers, reviewKyc, approveFunds, manageContent, viewAudit
Notifications	push, list, markRead

Current implementation: context reducers + hooks (useAuth, usePortalData, useToast) standing in for API calls; same signatures map 1:1 to future REST/GraphQL endpoints.

21. Page-to-Page Navigation Logic

- **Public:** Home → CTAs → Register / Demo / Accounts; nav → About/Markets/Partnership/Contact.
- **Onboarding:** Register → email verify → Login → Dashboard.
- **Portal:** Dashboard → KYC (if pending) → Accounts → Funds → trade; sidebar persists across portal.
- **Guards:** Guarded routes: unauthenticated portal access → Login (then redirect back).
- **Gating:** KYC-gated actions (withdraw) → redirect to KYC if incomplete.
- **Deep links:** Contextual deep links: notification → relevant page; ticket reply → ticket thread.

22. Suggested Permissions by Role

Capability	Visitor	Client	IB	Support	Compliance	Finance	Admin
Browse public site	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Portal / trade	No	Yes	Yes	-	-	-	Yes
Submit KYC	No	Yes	Yes	-	-	-	-
Review KYC	No	No	No	No	Yes	No	Yes
Approve funds	No	No	No	No	No	Yes	Yes
Manage tickets	No	Own	Own	Yes	-	-	Yes
Partner reports	No	No	Yes	-	-	-	Yes
Manage users/content	No	No	No	No	No	No	Yes

23. Recommended Future Integrations

- **Trading platform:** MT4/MT5 or cTrader bridge for real trading + live balances.
- **Payments:** Stripe / bank rails / e-wallets / crypto gateway for real money movement.
- **KYC/AML:** Sumsb / Onfido / Jumio for automated identity verification.
- **Market data:** Real-time quotes feed + TradingView charts.
- **CRM/marketing:** CRM (HubSpot/Salesforce) + email automation for lead nurture.
- **Notifications:** SendGrid (email), Twilio (SMS/OTP), web push.
- **Analytics:** GA4 / Mixpanel + server-side conversion + affiliate tracking.
- **Security:** Authenticator / SMS 2FA, device management.

24. Costs, Licensing & Go-Live

Current status:

This deliverable is a front-end application using simulated (mock) data persisted locally. Live trading is NOT active in the current build — no real orders, balances, payments, or identity checks are processed.

When live trading starts:

Live trading begins only after the following are completed and approved. Each is a separate workstream beyond the current front-end build:

- **Backend:** Backend / API layer connecting the app to real services.
- **Trading engine:** Trading platform / liquidity integration (e.g. MT4 / MT5 / cTrader bridge) for real orders and balances.
- **Payments:** Payment gateway onboarding and approval (cards, bank, e-wallet, crypto).
- **KYC/AML:** Automated identity-verification provider connected and live.
- **Market data:** Real-time price/market-data feed subscribed and connected.
- **Licensing:** Brokerage regulatory licensing and compliance sign-off in the operating jurisdiction.

Third-party costs (paid services — not free):

The integrations in Section 23 are commercial third-party services. Their API keys are paid credentials with setup and/or ongoing usage charges, billed by each provider and NOT included in this build:

Service	Typical cost model
Trading platform / bridge	License + monthly/setup fees
Payment gateways	Per-transaction % + fixed fee, plus setup
KYC / AML provider	Per-verification (per-check) fee
Market-data / price feed	Monthly subscription
Email / SMS / OTP	Usage-based (per message)
Cloud hosting, domain, SSL, monitoring	Recurring subscription

Exact pricing depends on the chosen provider, transaction volume, and region, and will be confirmed in a separate commercial quotation. API keys/credentials for these services are not free of cost.

25. Final Master Workflow Summary

VISITOR → (marketing / IB referral) → REGISTER → VERIFY EMAIL → LOGIN → KYC → OPEN ACCOUNT → DEPOSIT → TRADE → WITHDRAW → SUPPORT / GROW (IB)

A visitor is captured as a lead and nurtured into a registered user. After email verification and KYC approval, the client opens a trading account, funds it, and trades — monitored from a KPI dashboard. Money movement (deposit, withdrawal, transfer) flows through validated, status-driven workflows with finance and compliance gates. Support, notifications, and an optional IB partner track run throughout, while admins govern users, compliance, finance, content, and partners behind the scenes. Every module is status-driven, auditable, permission-scoped, and integration-ready — built today as a mock-data SPA that maps cleanly onto a real backend.

Appendices — Design & Architecture

Appendix A — Reusable Component System

A.1 UI primitives (components/ui)

Button, Card, Badge/StatusChip, Tabs, Modal, Dropdown, Toast, Accordion, Input, Select, FileUpload, Skeleton, EmptyState, ErrorState, StatCard, ProgressBar, DataTable.

A.2 Layout components

Navbar (responsive + mobile drawer), Footer, PortalSidebar, PortalTopbar, PublicLayout, PortalLayout, Container, Section.

A.3 Marketing / composite components

HeroBlock, StatsStrip, FeatureCard, MarketCategoryCard, AccountComparisonCard, PartnerBenefit, InfinityRibbon, ContactForm, AnimatedCounter, ScrollReveal.

A.4 Portal components

KpiWidget, AccountsTable, DepositMethodCard, WithdrawForm, TransferForm, TransactionHistory, KycStepCard, SupportTicketForm, DownloadCard, RegisterStepper, LoginForm.

Appendix B — Recommended Folder Structure

```
src/
  main.tsx
  App.tsx
  routes.tsx
  assets/
  styles/
  lib/
  data/
  context/
  hooks/
  animations/
  components/
    ui/

    marketing/
    portal/
  pages/
    public/
    auth/
    portal/
  Support
```

logos, textures, fonts
globals.css, tailwind layers
cn(), formatters, constants
mock accounts, markets, transactions
AuthContext, PortalDataContext, ToastContext
useAuth, usePortalData, useToast, useReducedMotion
framer variants, gsap timelines
Button, Card, Tabs, Modal, ...
Navbar, Footer, Sidebar, layouts
HeroScene, Globe, InfinityRibbon, Particles
HeroBlock, StatsStrip, FeatureCard, ...
KpiWidget, AccountsTable, DepositMethodCard, ...
Home, About, Accounts, Markets, Partnership, Contact
Login, Register, Demo
Dashboard, Accounts, Funds, Kyc, Downloads, Profile,

Appendix C — 3D & Animation Plan

Element	Tech	Behavior
Hero laptop + mobile + waveform	R3F / Three.js	Floating mockups over glowing red market wave + particles
Rotating globe + arcs	R3F / Three.js	Slow auto-rotate, glowing connection arcs (partner section)
Infinity ribbon	R3F / shader	Glowing red looping light ribbon (partnership page)
Section backgrounds	GSAP / canvas	Subtle red particle field + animated waveform
Scroll reveals / parallax	Framer Motion	Layered fade/slide on enter, parallax depth
KPI counters	Framer Motion	Count-up on in-view
Cards / buttons	Framer + CSS	Lift + red edge-glow on hover
Nav / tabs	Framer Motion	Animated active indicator, layout transitions
KYC / funds progress	Framer Motion	Animated progress + status transitions

Accessibility: all 3D is lazy-loaded behind Suspense + skeleton; prefers-reduced-motion renders static fallbacks. Easing is fast and elegant — premium, never excessive.

Appendix D — Design System

D.1 Color palette

Token	Value	Use
bg-base	#050505	App background (near-black)
bg-elevated	#0a0a0a	Elevated background
panel	#111111 -> #181818	Cards / glass panels
primary (red)	#e11d2e	Accent, CTAs, glows, active states
text	#ffffff	Primary text
text-muted	#9aa0a6	Secondary text
border	#222222	Thin dark borders (red on active)
success	#16a34a	Status: Active / Approved
warning	#f59e0b	Status: Pending
danger	#dc2626	Status: Rejected

D.2 Typography

- **Primary:** Inter (400-800) - body, UI, data.
- **Display:** Space Grotesk (500-700) - display headlines, brand.
- **Scale:** Scale: 12 / 14 / 16 / 20 / 24 / 32 / 48 / 64px with tight display leading.

D.3 Spacing & utilities

- **Spacing:** 4px base scale (4/8/12/16/24/32/48/64/96).
- **Utilities:** .glass-panel, .red-glow, .card-lift; consistent radii; reduced-motion fallbacks everywhere.

Appendix E — Implementation Phases

Phase	Scope	Deliverables
1 - Foundation	Scaffold + design system	Tailwind tokens, UI primitives, contexts, mock data, toasts, layouts
2 - Marketing	Public website	Navbar/Footer, Home + all public pages, 3D hero + globe, scroll reveals
3 - Auth & Shell	Login + portal shell	Auth flow, route guards, sidebar shell, dashboard + KPIs + accounts table
4 - Portal modules	Feature depth	Funds, KYC, downloads, profile, support, multi-step onboarding
5 - Polish & QA	Production readiness	Skeleton/empty/error states, responsive, a11y, reduced-motion, build QA
